

Meet Casper.

Casper™ Cloaking Technology

BY DESIGNTEX

Cloaking. A history.

1968

A starfleet commander steals a cloaking device from an alien spaceship to evade a fatal attack.

1987

A US Special Forces rescue team is stalked through a Central American jungle by an alien predator that uses cloaking technology.

2005

A young wizard acquires a cloak granting him complete invisibility.

2017

Designtex introduces Casper Cloaking Technology.

At last, Science Fiction becomes Science Fact.

Meet Casper.

Casper™ Cloaking Technology by Designtex, a Steelcase company, is an ingenious new architectural film for glass walls. It obscures digital screens to outside view.

It's the perfect confidentiality cloak, obscuring only the light transmitted by large LED displays.

Anyone looking into the room from the outside sees just a black screen, while everyone in the room can work freely with peace of mind.

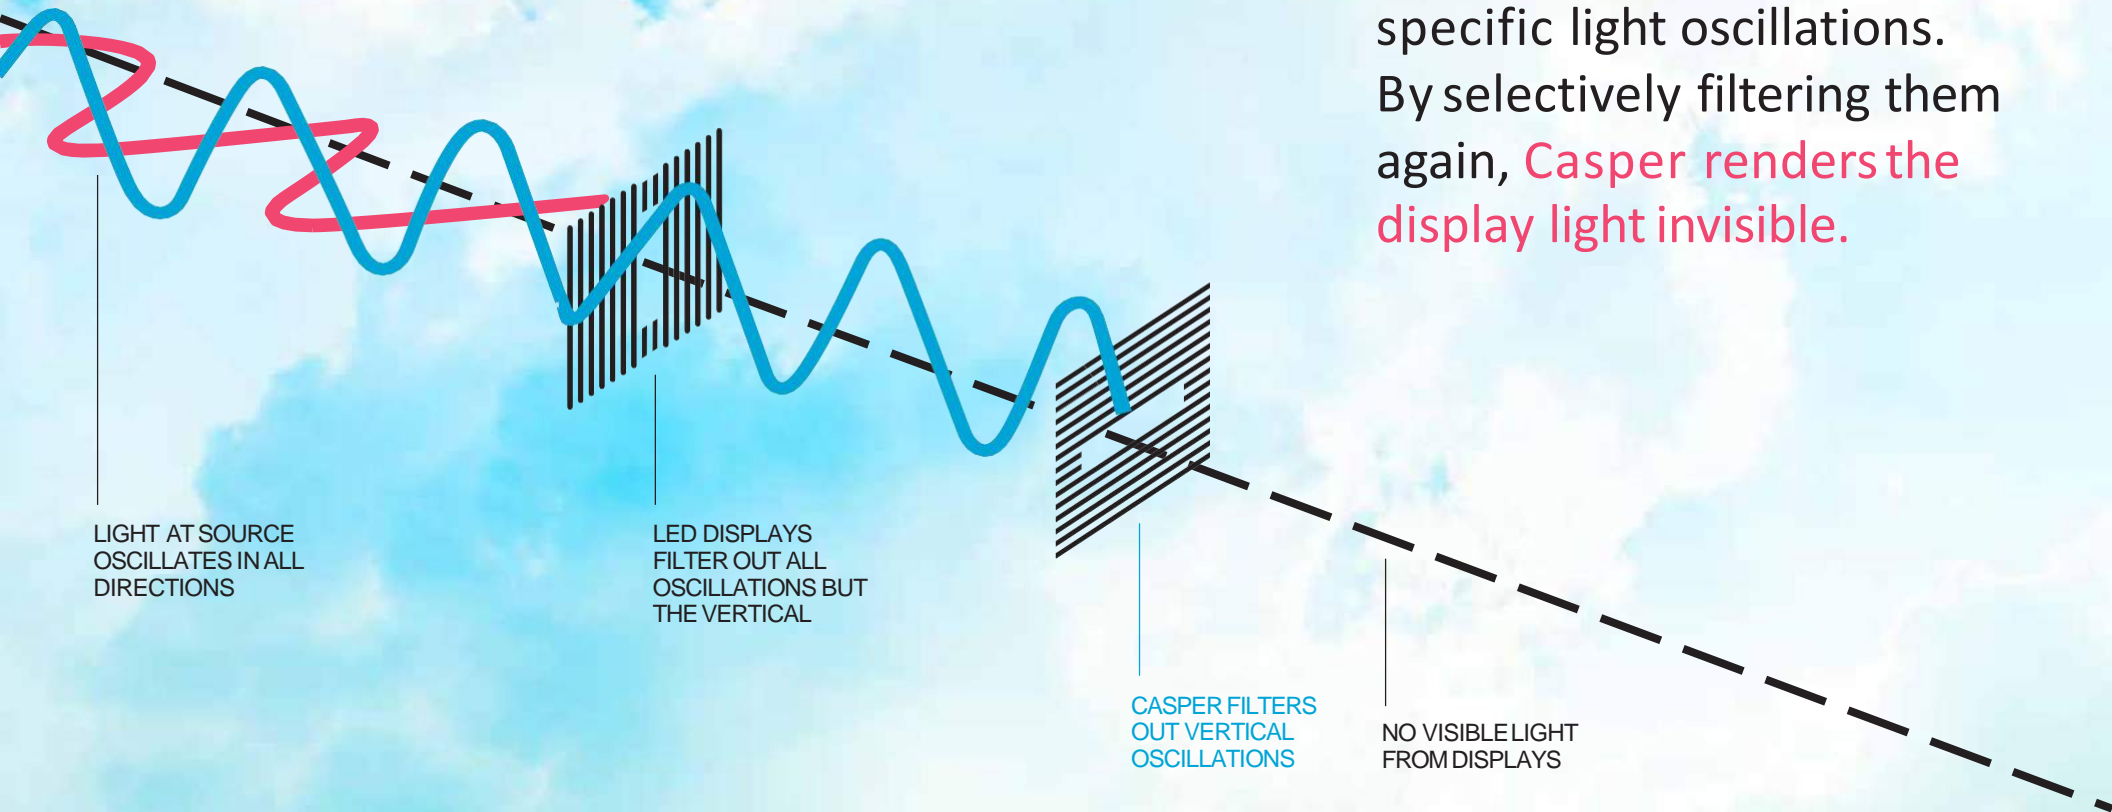

Casper, a catalyst for collaboration.

Privacy in plain sight, now there's an idea.
And it's going to change the way office space
is designed.

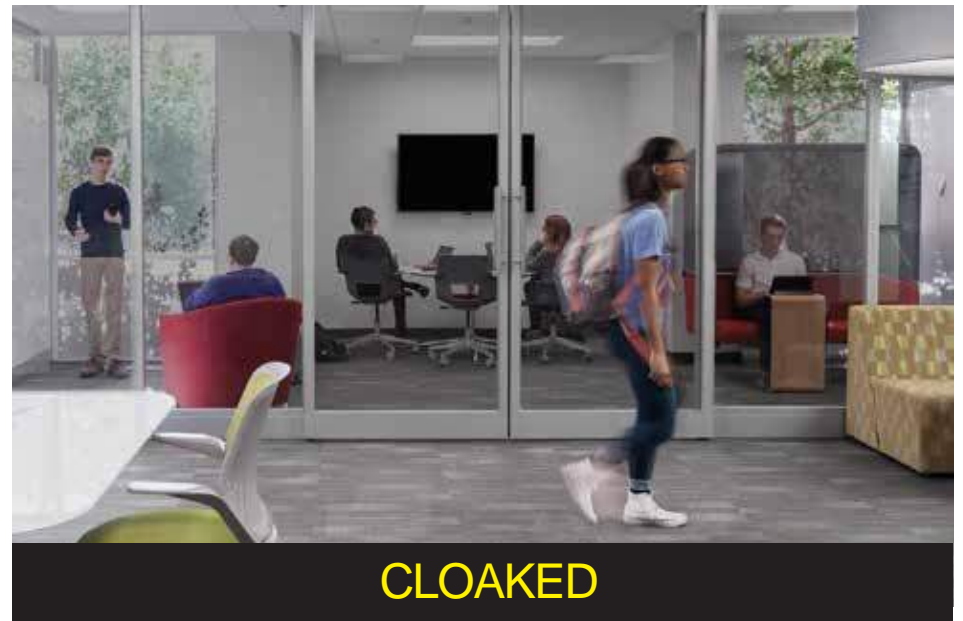

Magic?
No, rocket science.

LED displays filter specific light oscillations. By selectively filtering them again, Casper renders the display light invisible.

Casper, not compromise.

Until now, if you wanted to protect your data, you had to compromise. Smart glass, decorative films, curtains, blinds, walls. Even butcher paper and tape.

Casper's vital statistics.

Casper can be applied to any clear, smooth glass on new projects or existing glass.

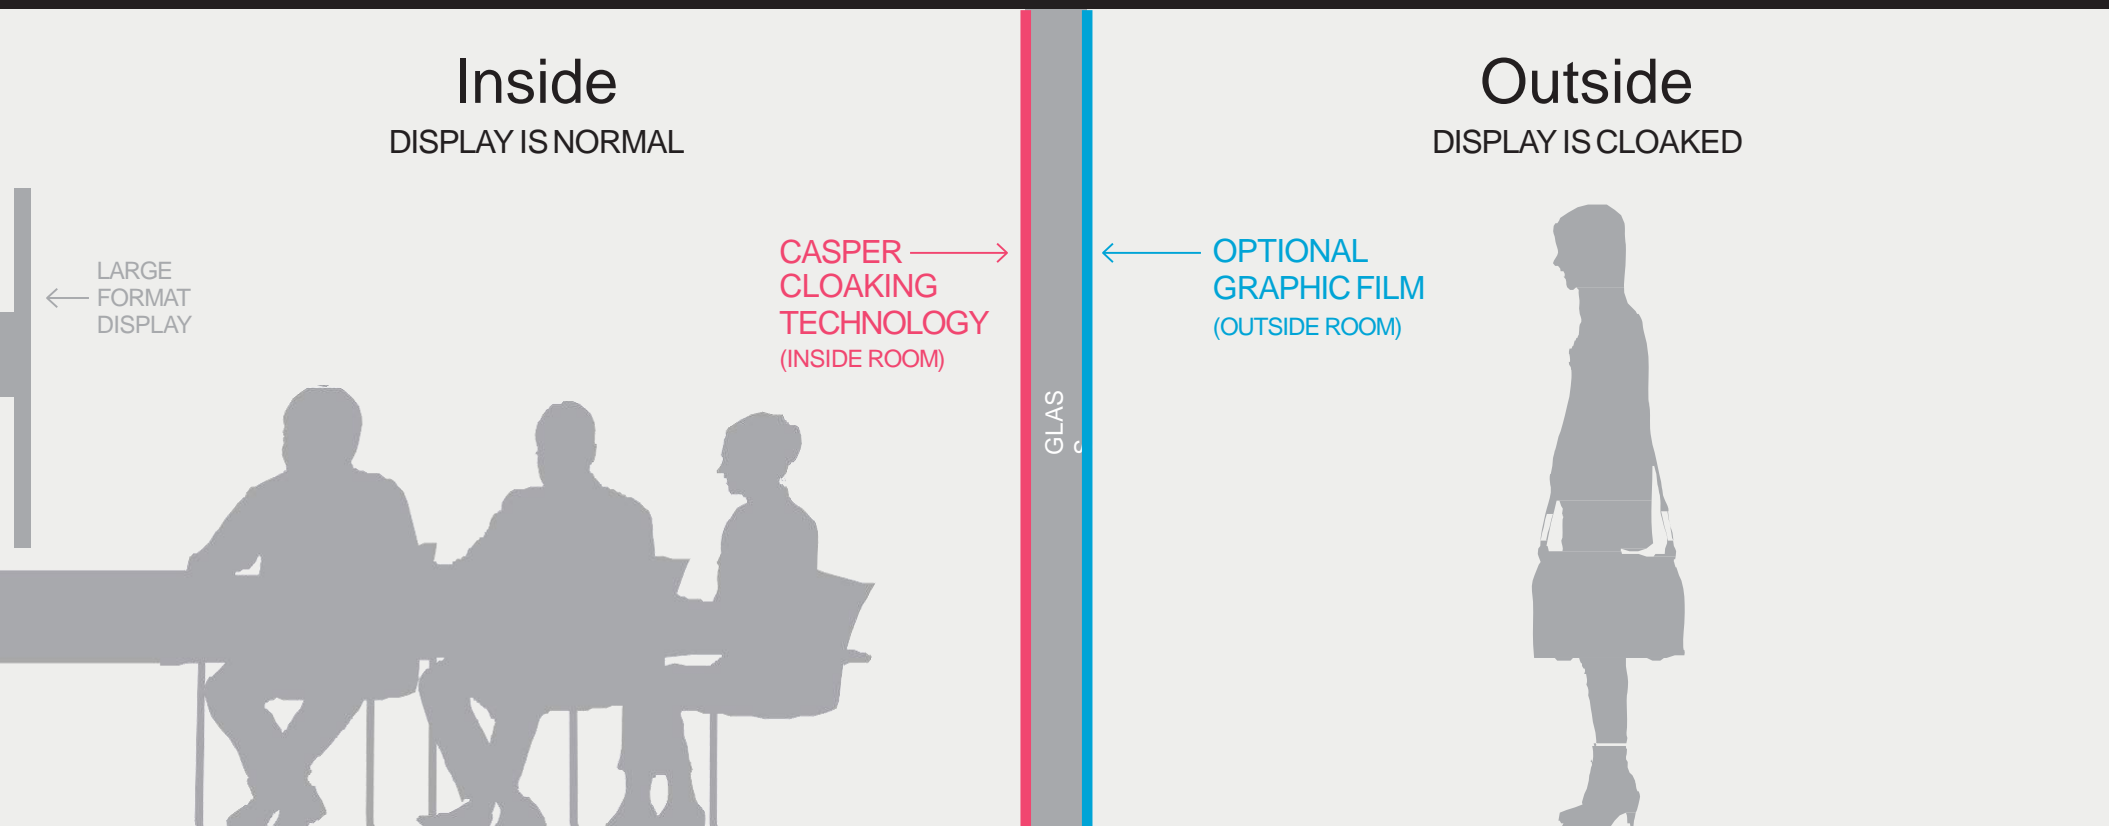

It is recommended for conference rooms, meeting rooms and team studios. It is engineered to work with most LED displays, 1 meter or larger.

Your sales representative will verify if your screen is compatible.

Cloak it with Casper, then customise.

Casper Cloaking Technology is installed on the glass inside the room with the display.

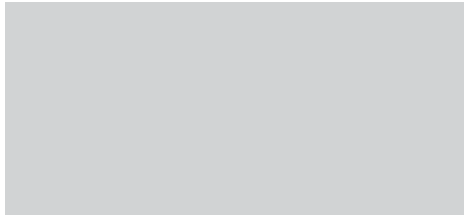

But an optional Graphic Film can be mounted on the outside glass to customise the appearance of the space.

15 graphic layers, your choice.

Here's our range of Graphic Film designs, but we also accept requests for custom patterns.

For custom patterns, a minimum order quantity may apply. Your sales representative will be happy to help you.
