

MADICO®
SAFETYSHIELD®

THE COMPLETE SOLUTION IN GLASS PROTECTION.

24/7 Passive Protection

We live in a far from perfect world. Whether it is man or nature, destructive forces are all around us. For over 35 years, Madico has been engineering products to increase protection against everything from criminal acts to catastrophic events. Storms, earthquakes, chemical explosions, bomb blasts, overhead/sloped glazing, theft, and vandalism are all risks that our SafetyShield® films can help to mitigate. The addition of Madico's SafetyShield films and anchoring restraint systems dramatically improves security for all buildings. It's 24/7 passive protection that you can rely on the instant a threat occurs.

24 / 7

advanced engineering Optimum risk management Window Film Protection Systems exceed industry safety standards

Security Solutions
Architectural Reinforcement

While our products certainly can't prevent crime or natural disasters from taking place, they can dramatically affect the outcome of these events. When windows give way, shards of glass and debris can cause severe injury and damage. In fact, a single square foot of glass can produce up to 200 deadly, razor-sharp fragments. Flying glass shards are a major cause of severe injury, and even death. Blown out windows also expose your building's interior to vandals, water, wind and other perils. Safetyshield® protective film provides a "shield" on windows which reduces the risk of glass breakage.

Customized Solutions

Madico's global dealer network of SafetyShield Premier Partners work closely with each customer to evaluate specific threats and offer the best possible solution. Madico offers several patented and proprietary anchoring systems designed to retain glass in the window frame, each with its own

level of performance. Our SafetyShield Premier Partners will work with you to select the appropriate anchoring system, in conjunction with the application of our safety film, to meet your specific criteria and threat concerns.

Our SafetyShield solar control series films also offer the added benefit of energy savings. They keep out up to 78% of the sun's heat, dramatically lowering air conditioning costs. In the winter, the same film helps retain interior heat, reducing heating costs.

Our safety glazing systems are in place at some of the most highly protected buildings in the world including the Smithsonian, the Louvre, and New Scotland Yard.

Testing that Exceeds the Standard

Madico's SafetyShield films have been extensively tested by independent testing facilities and meet Safety Glazing criteria as defined by the U.S. Consumer Product Safety Council (CPSC) and Underwriters Laboratories. Throughout our history, hundreds of windows protected by various Madico SafetyShield solutions have been subjected to both high explosive charges as well as shock tube blast mitigations to meet or surpass GSA and ISO blast criteria. Where most manufacturers test for minimum code requirements, Madico's films have always met or exceeded the requirements of more U.S. and international standards for safety and security than any of the competition.

A category C blast load, 4psi 30psi/ms is detonated.

Shock wave breaking untreated window. Glass fragments are blown into the building creating a deadly hazard.

Shock wave hitting treated window with SafetyShield 800 and four-sided FrameGard attachment system. Performs to GSA conditions 2.

Madico SafetyShield Premier Partner Global Network

SafetyShield Premier Partners have been hand-selected by Madico and certified as an elite group of safety and security professionals to market and install our advanced SafetyShield blast mitigation systems. Our Premier Partners have undergone extensive training through the SafetyShield program in order to ensure the proper implementation of these sophisticated systems.

Together, SafetyShield Premier Partners form a global network of safety film and blast mitigation specialists available to work on installations worldwide.

Manufacturer Expertise

Madico's own SafetyShield team of specialists works closely with each of our Premier Partners to ensure that they have access to the latest performance test reports, sales training, installation certifications, and warranty information. Madico recognizes the critical role that blast mitigation films play in the health and safety of a building's occupants and take our role as manufacturer of these products very seriously. We feel we have a moral obligation to ensure that our products are both utilized properly and installed correctly, hence the formation of our SafetyShield Premier Partner network.

Innovative Development

A History of Innovation

Madico, Inc. was established in 1903 in Woburn, Massachusetts. The same manufacturing facility is in use today along with a recently added facility in St. Petersburg, Florida. As a founding member of AIMCAL- the Association of International Metallizers, Coaters and Laminators, Madico is and always has been the pioneer and world leader in the development of window protection systems. The company's commitment to glass film innovation has earned recognition from such esteemed organizations as the Protecting People First Foundation, while Madico's dedication to responsible testing has helped it earn certifications from Factory Mutual, Underwriters Laboratories and other reputable agencies.
